18A. Exhibit A. Origin and Breeding History of Pioneer Wheat Cultivar 25R44.

Pioneer® cultivar '25R44', a soft red winter wheat (*Triticum aestivum* L.) was developed by Pioneer Hi-Bred Int'l., Inc.. Using a modified pedigree selection breeding method, 25R44 was derived from the cross:

WBA211D2*2555/WBA532P1

WBA211D2 was an experimental line derived from the cross: '2553'*Beau/2548 sib. WBA532P1 was an experimental line derived from the cross 2548 sib./Coker 68-15*MO W7510. The detailed parentage of 25R44 is:

2553/Beau//2548 sib/3/2555/4/2548 sib//Coker 68-15/MO W7510.

The single cross WBA211D2/2555 was made in the 1988 spring greenhouse cycle and was designated WBJ1251. During the 1988 fall greenhouse cycle the F₁, WBJ1251, was crossed with WBA532P1 and the final cross designated WBK0266. The subsequent breeding history of 25R44 is described below.

<u>Year</u>	<u>Generation</u>	
1988	final cross	
1989	F ₁	F ₁ grown in transplant nursery at Windfall IN.
1989-90	F ₂	Bulk populations grown at Windfall and Ft. Branch, IN. Individual spike selections made at Windfall, IN.
1990-91	F ₃	Headrows from F ₂ selections grown at Windfall, IN. Selected rows cut and threshed individually.
1991-92	F ₄	A 3 row X 3-meter observation plot was planted at Windfall and Ft. Branch, IN. A one meter section of row was harvested from each selected plot and threshed in bulk.
1992-93	F ₅	A seven row X 3-meter plot was planted at Windfall and Ft. Branch, IN. Fifty spikes were harvested from each selected plot and threshed individually.
1993-94	F ₆	Twenty headrows of each F ₅ selection were grown at Windfall and Ft. Branch, IN. Selected rows were cut and threshed individually. This selection was made at Windfall.
1994-95	F ₇	Preliminary yield testing of an F ₅ selection from an F ₆ headrow. This selection designated WBK0266B1.
1995-96	F ₈	Advanced yield testing of WBK0266B1. 200 individual spikes were harvested from a small bulk increase.

1996-97	F ₉	Elite yield testing of WBK0266B1. 200 headrows planted within a space planted bulk increase. Offtype headrows destroyed prior to maturity. About 100 of the remaining rows individually cut and threshed. Two spikes were taken from each harvested row. Space planted bulk lost due to ice damage.
1997-98	F ₁₀	Elite yield testing continues of WBK0266B1. Seed from purification headrows planted in individual progeny plots which surround 200 headrows. Offtype plots and headrows destroyed prior to maturity. Equal number of spikes harvested from remaining progeny plots for a total of 1000 spikes. Progeny plots harvested in bulk which constitutes Breeder Seed. Bulk seed, headrow bulks, and spikes turned over to Pioneer's Parent Wheat Seed Group.
1998-99	F ₁₁	Elite yield testing continues, line now designated YW584. Seed increase continues by Pioneer Parent Wheat Seed Group.
1999-2000	F ₁₂	Elite yield testing continues, line designation now XW584. Seed increase continues by Pioneer Parent Wheat Seed Group.

Decision to release WBK0266B1 was made in August, 2000 at which time the commercial code, 25R44 was assigned.

The cultivar 25R44 was bred and selected for any and all of the following characteristics in the field environment: disease resistance, plant type, plant height, head type, straw strength, maturity, grain yield, test weight, and milling and baking characteristics.

25R44 has been shown to be uniform and stable since the 7th generation, or for the last 5 generations. Variants are limited to slightly taller plants or awnless plants, at a frequency no greater than 1/15,000 in total.

18B. Exhibit B. Statement of Distinctness

25R44 is most similar to Pioneer variety 2540 but with the following distinguishing characteristics:

1. The coleoptile color of 25R44 is white while that of 2540 is red.
2. The spike shape of 25R44 is oblong while that of 2540 is fusiform.
3. The glume beak length of 25R44 is medium while that of 2540 is long.
4. The reaction of 25R44 to leaf rust (*Puccinia triticina*) is moderately resistant while that of 2540 is susceptible (Table 1).

16. ADDITIONAL INFORMATION ON ANY ITEM ABOVE, OR GENERAL COMMENTS

18D. Exhibit D. Additional Description of the Variety**1. Yield and Agronomic information.**

Preliminary yield testing of 25R44 began in the 1994-95 growing season and wide scale testing has been conducted from the 1995-96 growing season to the present. It has shown adaptation to the northern soft wheat regions based on tests conducted in Missouri, Illinois, Indiana, Ohio, and Michigan (Table 1).

2. Information on reaction to major diseases.

Leaf rust – very good resistance to prevalent races in the northern soft wheat region.

Powdery mildew – moderate resistance to the prevalent isolates of powdery mildew present in the soft wheat region.

Soilborne and wheat spindle streak mosaic virus – good resistance to both viruses.

Leaf blights – good tolerance to the complex of most common organisms that cause leaf blights including: *Septoria tritici* blotch, *Stagnospora nodorum* blotch, and tan spot.

Fusarium head blight – slightly above average resistance.

3. Information on reaction to major insects.

Hessian fly – susceptible to the predominant biotypes of Hessian fly in the northern soft wheat region. Has screened susceptible to biotypes E, and L in tests conducted by the Dept. of Entomology, Purdue University, in conjunction with the USDA-ARS Insect and Weed Control unit.

4. Information on Milling and Baking Qualities.

25R44 has demonstrated average milling and below average baking qualities (Table 2).
